◆ COMPANY HISTORY

2006

2010

20

- MacMac Established
- Reliability Lab Established
- Huashan Plant Enter into Production
- ISO9001-20000 Certified by Bureau Veritas
- M1d Series FRED Released
- M1i NPT IGBT Released

- National Key High-Tech Enterprise Certified
- M2d Fu Series FRED Released
- Reincorporate as a Shareholding Company
- M2i Trench IGBT Released and Commercialized
- MACMIC Awarded as Notable Trademark
- Awarded 2014 National Key New Product

15

2020

2023

- Provincial Enterprise R&D Center Certified
- In-House IGBT as a Leading Brand Used in local EV Chargers
- M3d Series FRED Released
- Full IGBT Module Product Line Available Using M3i Chip
- Xinzhu Plant Finished Roofing Structure
- M5i Micro-Pattern Trench with Hydrogen Injection

- Listed in Shanghai Stock Exchange STAR Market
- Xinzhu Plant Kick-Off Fully Production
- M6i and M7i IGBT Released
- Awarded China “Little Giant” Enterprise
- Awarded China IP Rights Advantage Enterprise
- M6i and M7i IGBT Released

◆ COMPANY PROFILE

MacMic Science & Technology Co., Ltd. is a high-tech company consisting of scientists and engineers with expertise in power electronics and engaged in the development and production of power semiconductor products at home and abroad. MacMic designs, manufactures, markets, and sells high energy-efficient power semiconductor devices ranging from chips, discretes, and a variety of power modules. We provide customers with the best cost performance products. Our well-equipped manufacture, testing facilities, and skilled workers enable us to supply high quality and reliable products. Our fast and flexible ability to meet customer's demands highlights our business uniqueness as a great value to customer's competitive advantages.

◆ STRENGTHS

MacMic strives to provide top quality and performance power semiconductors to customers with a long-term commitment to use the best materials and implement the strictest quality control by the experienced and well-trained production team. To further fulfill customer's demands, we utilize state-of-the-art automation manufacturing facilities that give MacMic product competitive advantages to gain better customer satisfaction with consistent quality and fast lead time. MacMic provides customers most industry-standard specification products that give the customer an alternative choice with the same or better quality and performance but a much cost-improved source. In many cases, we are also willing to work closely with our clients to take the request for a custom-made product to accomplish their system design. This proves MacMic is a truly valuable partner to its customer.

◆ ADVANCED PRODUCTION & TESTING

All of our products are produced in a high automation production line with very vigorous testing standards. We pursue high volume production while maintaining a high yield rate. The advanced automation production facility is necessary to make the goal possible. We care about the long-term ability of our products to stay in high quality and high-reliability condition. Hence, we set up a cutting-edge Characterization Lab and Reliability Lab to conduct strict testing procedures before the product is released. We would ensure our product can perform as defined and stable operation without any risk of failure even in harsh environments.

FACILITY AND PRODUCTION LINE

Factory- Area:9500m², Cleanroom- Area:2000m²

Equipment: Pick and Place Machines \ Vacuum Furnace \ Al and Cu Wire Bonders \ X-Ray and C-SAM Scanners

CHARACTERIZATION LAB

Diode Reverse Recovery Tester
IGBT DC Parameter Tester
IGBT Switching Parameter Tester
IGBT Charge Tester
IGBT Short Circuit Tester
IGBT SCSOA / RBSOA Tester
HV-D Reverse Recovery Tester
8KV HV Static Parameter Tester
Power Semiconductor UIS Tester
SCR Static & Dynamic Parameter Tester
Surge Current Tester
Thermal Resistance Tester

RELIABILITY LAB

High Temperature Reverse Bias
High Temperature Gate Bias
Power Cycle
High / Low Temperature Cycle
High Humidity High Temperature-
Reverse Bias
85 / 85 Temperature / Humidity Test
Thermal Shock Test
Salt Spray Evaluation System
Vibration Evaluation System

FRED CHIP

MacMic is proud to be the earliest China Company to successfully develop high power Fast Recovery Epitaxial Diode (FRED) chips featured with the best price-performance in the market. Our single-chip rating is up to 1700V, 200A, and starting from 200V, 6A. Aside from various standard specifications, we are available to take custom-made design. The MacMic FRED chips demonstrate excellent performance in switching loss and conduction loss with faster T_{rr} and lower V_f values. The feature of soft recovery switching helps significantly improve the EMI interference in the circuit design. The FRED chips can be packaged to discrete or power module product forms and are ideal to use in the applications of Freewheeling, Snubber, and Output Rectification.

FRED CHIP

Ranges

- 200-1200V / 5-200A

Applications

- Welding Machine
- Freewheeling
- Snubber
- Output Rectification
- PFC

Features

- Short Recovery Time
- Low Reverse Recovery Charge
- Soft Recovery Characteristic
- Low Leakage Current
- Avalanche Energy Rated

IGBT DISCRETE

MacMic successfully introduces high-power IGBT discrete in the TO-247 package using a self-developed low V_{ce} Trench Field-Stop IGBT chip. The product line is divided into two categories by its switching speed. The “G3T” series is designed for typical power applications, such as Motor Drive, Power Conversion, and the switching frequency <15 KHz circuits. In contrast, the “G3U” series has a feature of high-speed switching which is well fit in Welding Machine, Induction Heating, and the switching frequency >15 KHz applications. MacMic discrete IGBT is available in both 650V and 1200V voltage ratings.

◆ IGBT DISCRETE

Ranges

- 650-1350V / 10-120A

Packages

- TO-247, TO-247 PLUS

Applications

- Welding Machine
- Induction Cooker
- Inverter
- SMPS, UPS
- Motor Drive

Features

- Fast Switching Speed
- High Short Circuit Capability
- Soft Turn-Off Characteristic

FRED DISCRETE

MacMic offers a limited range of power FRED discrete products, mainly in packages of TO-220(F), TO-3P, and TO-247. The FRED discrete inherits all the features of MacMic FRED chip and brings customers an even better value in terms of price-performance consideration. The 200V and 400V types are commonly used in Output Rectification as the V_f value of the FRED discrete is controlled to as consistent as possible so paralleling multiple devices are easy to implement. The 600V and 1200V are also good for high-speed rectification. Furthermore, given the very soft and fast recovery characteristics, they are no doubt perfect devices in the PFC application.

◆ FRED DISCRETE

Ranges

- 200-1200V / 8-100A

Packages

- TO-220, TO-220F,
TO-3P, TO-247

Applications

- Welding Machine
- SMPS, UPS
- Home Appliances
- PFC

Features

- Short Recovery Time
- Soft-Recovery Characteristic
- Low Reverse Recovery Charge
- Low Leakage Current
- Avalanche Energy Rated

IGBT MODULE

MacMic partners with other leading companies to acquire the advanced technology of IGBT chips as one of our die sources. In the meantime, we are also developing our own IGBT chips as another die source to be packaged in our IGBT modules. MacMic IGBT module features the “HN” series, which enables the design up to 50Khz in hard switching with $V_{ce(sat)}$ around 2.0V. The high-speed IGBT is a great fit for high-frequency applications. Our “6TC” series is a cost-effective product aiming at Motor Drive and similar power conversion applications. We are also proud of several types of IGBT modules, including Electric Vehicle Power Drive and high-efficiency 3-level switching topology. All of MacMic IGBT modules adopt the latest Trench Field-Stop chip technology that ensures the customers to obtain the switching losses and lowest conduction.

FRED MODULE

MacMic FRED module is fully made by our own FRED chip with the best cost performance in the industry. Based on the market requirements, we have products made in the low-cost non-isolated package and the full-isolated package. MacMic FRED modules have superior characteristics of fast and soft recovery characteristics which are excellent using in high speed switching such as PFC and Chopper applications. Its low V_f feature suggests the low conduction loss making the product excellent apply in the output rectification circuit. The product line offers various inside circuit configuration that helps the designers easily to choose, including Single Unit, Half-Bridge, Common-Cathode, and Common-Anode.

◆ FRED MODULE

Ranges

- 100-1700V / 60-600A

Packages

- FJ, FZ, FN, FY,
FYB, FS, FD

Applications

- Welding Machine
- SMPS, UPS
- Inverter
- Chopper
- PFC

Features

- Short Recovery Time
- Soft-Recovery Characteristic
- Low Reverse Recovery Charge
- Low Forward Voltage
- Stressless Package
- Avalanche Energy Rated

MOSFET MODULE

MacMic is one of the few semiconductor companies supplying power MOSFET modules. Customers can utilize the benefit of module configuration to easily realize high power system design instead of paralleling multiple MOSFET discretes. This can also improve production yield and system operation reliability. MacMic MOSFET modules come with some exclusive features. The low $R_{ds(on)}$ of the MOSFET module can work as a high power Synchronous Rectifier to achieve better efficiency in the high power equipment, such as Plating Power. The 6-Pack and Half-Bridge configuration are perfect for the inverter circuit of a battery source 2KW~15KW Motor Drive. The Single-Switch module is also a great replacement to the Mechanical Contactor Relay.

◆ MOSFET MODULE

Ranges

- 60-150V / 200-850A

Packages

- NH, NDB, NA

Applications

- Low Speed Electric Vehicle
- Motor Drive
- Synchronous Rectifier Circuit

Features

- Fast Switching Speed
- Low $R_{ds(on)}$
- High Avalanche Energy
- High Current Carrying Capability

THYRISTOR (SCR) MODULE

Our Thyristor modules are manufactured by soldering and bonding contact process using extremely low leakage current and high-reliability Thyristor chips. The product line is popular for its long lifetime and stable operation performance thanks to our strict production and material quality control. Although Thyristor is considered a relatively mature product, our customers can experience distinct specifications from our modules compared to many others' offers in the market, not to mention our competitive advantage for price. MacMic Thyristor modules are frequently used in AC Power Control, Header, Rectification, Static Switch, Soft-Starter, etc.

◆ THYRISTOR (SCR) MODULE

Ranges

- 300-1600V / 25-200A

Packages

- KA, KS, KLB, KT, KU, KX

Applications

- Inverter
- Soft-Starter
- SMPS, UPS
- Welding Machine
- AC-DC Circuit

Features

- Compact Structure
- High Blocking Voltage
- High Current Capability
- High Reliability
- High Performance Price Ratio

RECTIFIER MODULE

MacMic provides Rectifier Diode Modules for single-phase and three-phase AC source applications. Like our other module product lines, the Rectifier Diode Modules are fully compatible with the industry common configurations that give the customer a better choice for good quality at a more acceptable price. Our Rectifier Diode Modules have a Blocking Voltage of more than 1600V and are available for higher rating requests. The superior Short Circuit Current (i^2t) and Surge Current (I_{fsm}) specifications show the ruggedness of the modules that are more reliable to work in a tougher AC Line input condition.

◆ RECTIFIER DIODE MODULE

Ranges

- 1600-1800V / 50-400A

Packages

- DA, DAB, DS, DD,
DL, DE, DEB, DF,
DFB

Applications

- Inverter
- SMPS, UPS
- Welding Machine
- Medical Power Supply
- AC-DC Circuit

Features

- Compact Structure
- High Blocking Voltage
- High Current Capability
- High Reliability
- High Performance Price Ratio
